Nanyang Technological University

August 2019

Motivation

More and more people are getting news via social networks

- 30% of Americans now get news from Facebook
- 50% of social networks users actively share or repost news stories, images or video
- 46% of social networks users discuss news issues within their social circles

Rest of this talk ...

1 Rumor Source Identification

2 Conclusion

Outline

1 Rumor Source Identification

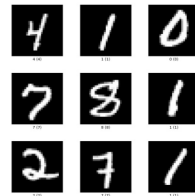

2 Conclusion

Machine Learning

- **Supervised learning**: learn a map $Y = f(X)$ to relate an input X to an output Y from a training set of input-output pairs $\mathcal{D} = \{(X_i, Y_i) : i = 1, \dots, n\}$.

Machine Learning

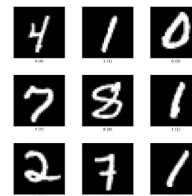

- **Supervised learning**: learn a map $Y = f(X)$ to relate an input X to an output Y from a training set of input-output pairs $\mathcal{D} = \{(X_i, Y_i) : i = 1, \dots, n\}$.
 - ▶ **Classification**

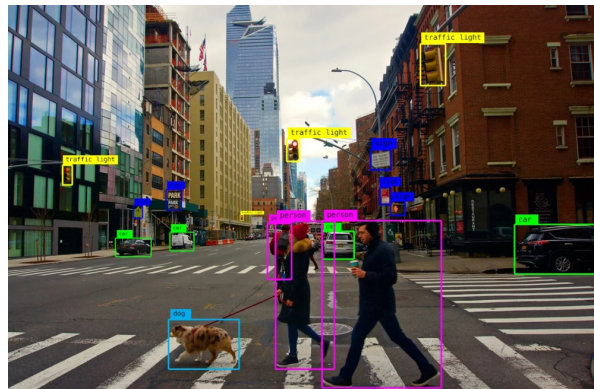

Machine Learning

- **Supervised learning:** learn a map $Y = f(X)$ to relate an input X to an output Y from a training set of input-output pairs $\mathcal{D} = \{(X_i, Y_i) : i = 1, \dots, n\}$.

- ▶ Classification

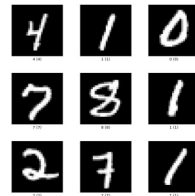

- ▶ Object detection and recognition

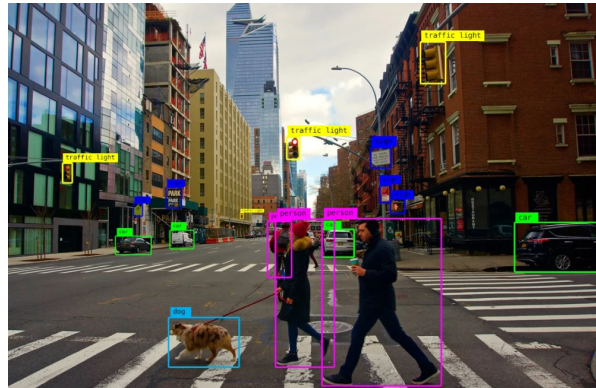

Machine Learning

- **Supervised learning:** learn a map $Y = f(X)$ to relate an input X to an output Y from a training set of input-output pairs $\mathcal{D} = \{(X_i, Y_i) : i = 1, \dots, n\}$.

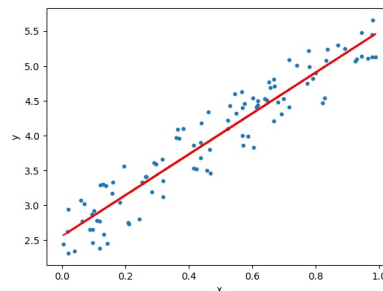

- ▶ Classification

- ▶ Object detection and recognition

- ▶ Regression
